SUMMARY

Front-end engineer with 5+ years building production web applications in React, Angular and Vue with TypeScript. Most recently, I worked on complex features from scoping and estimating through shipping, and I weighed technical debt against business deadlines. At Threeflow, I built multi-step workflows with AI-assisted document upload and helped migrate the full codebase from Vue 2 to Vue 3 on a four-person team.

TECHNICAL SKILLS

Front End: React, Vue 3 and Vue 2, Next.js, Angular, React Native, HTML5, CSS3, Angular Material, Bootstrap

Languages: JavaScript, TypeScript, SQL

Back End and Data: Node.js, .NET, Express, PostgreSQL, RESTful APIs

Testing and Tools: Cypress, Vitest, Git, GitHub, Jira, Azure DevOps

Practices: Component architecture, code review, scoping and estimation, accessibility (WCAG), localization (l10n)

PROFESSIONAL EXPERIENCE

Threeflow, Software Engineer II

Aug 2024 – Oct 2026

Remote. Stack: Vue, Cypress, Vitest

- Built a new multi-step workflow for a previously unsupported customer segment, extending components shared with the existing workflow without disrupting it in production.
- Replaced a manual-only data-entry flow with three paths: AI-assisted file upload that parses documents and pre-fills forms, manual entry, and save-as-draft to finish later.
- Co-led a feature that let users create and submit records before all required data was available, a capability the platform had never supported.
- Built a retry flow for AI document processing that let users keep, remove or replace previously uploaded files and re-run extraction, recovering from bad data or parsing errors without starting over.
- Extended a heavily conditional shared component to support a new admin-assisted option for two user types with no regressions, and proposed splitting it into separate components to reduce technical debt.
- Broke down and estimated technical tickets, and built features from early concepts before backend infrastructure was ready, persisting multi-step form state in localStorage until APIs were available.
- One of four engineers who migrated the entire front-end codebase from Vue 2 to Vue 3 over several months and stabilized it for production.
- Reviewed code daily, walked teammates through complex logic, and interviewed candidates for a Design Systems Engineer role, evaluating their React work.

Dialexa, an IBM Company, Software Engineer

Sep 2021 – Aug 2024

Dallas, TX. Consulting engineer on enterprise client projects

- Delivered client applications in JavaScript, TypeScript, React, Angular and React Native, building tested, reusable components and utilities. Reviewed code daily, and scoped and estimated tickets.
- **The Cash Store (Cottonwood Financial):** Built React features for a consumer lending platform, including custom UI components, search and filter components, and dynamic pricing and percentage calculations.
- **Deloitte AboutMe:** Built dynamic, responsive content with custom JSON-driven Angular Material components, made the app mobile-friendly, expanded its WCAG accessibility, and added localization (l10n) support.

T-Mobile, Associate Software Engineer

Jul 2021 – Sep 2021

Frisco, TX

- Developed internal tools in OutSystems, writing SQL queries and JavaScript for data filtering and UI behavior.

EARLIER CAREER

T-Mobile: Retail Associate Manager and Mobile Expert, top 3% in sales (2018 – 2021)

New York Life: Financial Services Consultant (2017 – 2018)

EDUCATION

Thinkful, Software Engineering Flex Program (full-stack JavaScript, React, Node.js)

Jun 2020 – Jan 2021
